

CYBERSECURITY CONSULTATION & ASSESSMENT

The Learning Technology Center (LTC), a program of the Illinois State Board of Education (ISBE), provides educational technology services, support, and professional learning to Illinois K-12 schools, educators, and technology teams.

Through our cybersecurity consultation and assessment, your school or district can enhance its digital defense and build a strong foundation for a resilient cybersecurity posture.

Innovative Solutions to Emergent Threats

Our cybersecurity assessment delves into the evolving threat landscape and evaluates how your district can harness cutting-edge defenses that meet your unique needs and goals.

Each assessment starts with a district visit, where our team reviews your cybersecurity incident response plans, disaster recovery plans, and both network and physical security set-up. We then offer enhancement recommendations based on the latest trends and innovative solutions developed specifically for K-12 environments.

Planning for Success

We offer a holistic review of your cybersecurity protocols, incident response plans, and disaster recovery plans. If you haven't started your plans yet, don't worry! We can start on the right foot with plenty of templates, resources, and examples from other K-12 environments.

That's not the end of our support. We'll also follow up with you throughout your cybersecurity journey to ensure you have the resources, connections, and guidance needed for long-term success.

Equipping You for the Next Step

After our multi-point assessment, you'll receive a written review of what we found and actions you can take to bring your cybersecurity posture up to speed, both immediately and in the future.

Each review also comes packed with resources, plans, and advice on how to get started, where to focus your resources, and how to improve your overall cybersecurity posture.
